DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 51-57 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 8-13, 41, and 43 of U.S. Patent No. 6,807,165 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to means for generating communications information for transmission on time division messaging; wherein, a number of time frames, each divided into a plurality of time slots, are used to transmit control channel messaging information and channel data messaging information. U.S. Patent '165 does not explicitly disclose means for generating initial control communications information in the last time slot of a respective time frame indicating initial presence of a respective terminal in order to start communicating with other terminals. However, U.S. Patent '165 discloses switching transmission of initial control communications information from the last time slot to another free earlier time slot of a subsequent time frame in order to reduce the chance of collision with other terminals also initially registering. This implies that the last time slot of a respective time frame

Art Unit: 2667

is already used to carry the initial control communications information indicating the presence of a terminal. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the feature of designating the last time slot of a time frame to carry initial control communications information in U.S. '165, to indicate initial presence of a respective terminal.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Belcea (US Patent No. 6,807,165 B2) discloses time division protocol for an ad-hoc, peer-to-peer radio network having coordinating channel access to shared parallel data channels with separate reservation channel.

Ho (US Patent No. 6,747,959 B1) discloses voice data integrated multi-access by self-reservation and blocked binary tree resolution.
